The background features a vertical stack of horizontal wood grain patterns in various shades of brown and tan. On the left side, there is a faint, light-colored silhouette of a tree with many branches.

Find Your Style

The choice of flooring defines the style and ambience of your home. The many options within the ESTA PARKET range will transform your dreams into reality.

Hardwood timbers with their well known hard wearing properties make them ideal for parquet production. Subtle variations in the colours and tones of the wood species will add elegance and style to your home.

PURE ELEGANCE *Exclusivity, Charm and Balance*

3 Strip Ash Rustic Castle Grey Oil #8230

Pure Elegance is a harmonious combination of a classic sophisticated design and contemporary trends. This is a classical and modern collection of wood flooring that incorporates function and style with a broad selection of species and flooring styles. It is particularly designed to fit the most eclectic and delicate tastes.

CLEANING & MAINTENANCE

Any kind of hardwood floor adds not only charm but beauty to almost any room, but like most types of flooring, they need regular care on a regular basis to maintain their quality appearance.

Air temperature and air moisture:

- Parquet boards are produced of 100% natural timber. Therefore significant moisture variations can influence it.
- It is important to maintain the relative humidity in the room as stable as possible. Our recommended humidity is RH 40–60%.
- Recommended average temperature is 14–23 C.

General Care and Damage Prevention:

- Please monitor moisture and temperature as set out above and take corrective measures if necessary.
- Place doormats on both sides of your front door.
- Remove any grit or other abrasives immediately.
- Immediately wipe up liquid spills.
- If you spill (food or drinks), wipe up immediately with cloth or paper towels to prevent any permanent damage or staining.
- Protect all furniture with felt pads to avoid any scratching with movement.
- Close curtains or blinds to limit direct sun exposure.
- Avoid wearing high-heeled shoes on the floor, as they can dent or scratch the floor.
- Keep pet's nails trimmed to minimize damage to the surface.

GENERAL CLEANING

DRY CLEANING: Floors should be cleaned daily using dry cleaning methods, such as vacuum, soft broom or scissor mop. It is important to remove any abrasive particles of grit and dirt which may scratch the lacquered surface when trafficked under footwear, chair legs, and other items moved across the floor.

DAMP CLEANING:

- When necessary, the floor can be washed with a mild detergent (pH 6–8).
- Dip the mop into the bucket of prepared cleaning solution, wring it out completely, mop in the direction of the wood grain and repeat.
- When the water gets dirty, empty the bucket, mix a new batch of cleaning solution and continue mopping.

MOPPING TECHNIQUE:

- Always keep water to a minimum when cleaning your floors.
- Water is wood's worst enemy, so use a damp mop rather than a soaking wet one.
- Wipe up any spilled liquids and avoid any standing water or liquid as wood will absorb liquid and expand which could effect the stability of the floor.
- Do use a floor-cleaning product recommended by the floor finisher or opt for plain soap and water.

GENERAL AFTER-CARE

LACQUERED WOOD FLOOR

- Normal cleaning to remove surface debris is accomplished using a broom or vacuum cleaner
- To remove normal stains and dirt, the floor should be cleaned with a lacquered floor cleaning spray.
- Simply spray evenly across the floor, allow a minute to work on any stubborn marks and simply mop over.

OILED WOOD FLOOR

Maintaining with maintenance oil:

- After a certain period of use, the oiled floor will perhaps look slightly worn and matt and should be maintained with a small quantity of Maintenance Oil.
- Before oiling, clean the floor with a cleaner mixed with water.
- Maintenance Oil should be sprayed onto the floor and immediately polished in by hand or with polishing machine.
- Respray with oil if necessary.
- After approx. four to five hours (at 18–20 degrees Celsius) the floor may be used again.
- After 24 hours, the floor may be cleaned with soap.

CHOICE OF FORMAT

CONSTRUCTION OPTIONS

- Birch Plywood Core (multilayer parquet)

- 3 Layer Construction (bottom layer – birch veneer, core layer – solid pine strips, top layer – precious wood (Oak, Ash etc.)

Both constructions can be made in different thickness

14 mm with top layer thickness above 3 mm (Standard Construction)

- Most popular construction with installation on concrete floor with underlayment.
- Efficient floating installation with Click system.

16 mm thick with 6 mm top layer

- Possibility to have a long lasting 6 mm top layer on the parquet suitable for installation on concrete floor with underlayment. Such floor can be sanded as many times as solid parquet. The solution is outstanding for rooms, where advantages of solid floor are required but keeping the minimal floor height is important.

Alternative to Solid Floor

22 mm thick with 6 mm top layer

- Same useful thickness top layer as on solid floor
- Parquet can be installed straight to the beams with no need for the subfloor
- Higher stability due to sandwich construction
- Considerably Greener (Less hardwood trees will be used by manufacturing of same m² compared to solid floor)
- Floor can be sanded as many times as solid wood floor

22 mm thick boards with top layer thickness above 3 mm

Parquet can be installed straight to the beams with no need for the subfloor

- Higher stability due to sandwich construction
- Considerably Greener (Less hardwood trees will be used by manufacturing of same m² compared to solid floor)

THE STRUCTURE DRAWING & EXPLANATION

- All wood materials used in the production of ESTA PARKET are dried /conditioned within our factory complex, and this guarantees stability of the boards construction.
- Flooring boards are glued at low temperatures, there is no inner tension like in solid wood within the components making up the finished product, and therefore they perform better as a laid floor.
- The bottom layer is a Birch veneer, that adds to the board stability.
- The resins used in production are non-toxic, and the parquet complies with the severest health requirements.
- ESTA PARKET is recommended to be used over under floor heating. Our parquet performs well even under Scandinavian variations of moisture and temperature.

WOOD HARDNESS

The Brinell scale defines the hardness of wood. The higher the scale reading – the better the wood resists impacts and wear. The Brinell readings below were taken at 12% moisture content of the wood.

Please note that none of the wood species can resist essential spot impacts – a drop of heavy articles, for example. For the same reason it is recommended to glue soft felt pads to furniture legs.

	SOFT	MEDIUM	HARD	
Jatoba				7,0 - 7,7
Merbau				4,1 - 4,9
Ash				3,3 - 4,1
Oak				2,9 - 3,7
Walnut				2,8 - 3,5
Birch				2,2 - 2,7

ESTA CLICK PATENTED

- ESTA PARKET boards with click locking can be installed easily and quickly. No glue is necessary to fix the boards.
- The boards will close tight against each other once they are locked.
- Tight locking protects the boards against occasional spill of water.

TOP (WEAR) LAYER

- The top layer/plank of valuable wood is available in thickness 3,0–6,4 mm. After installation it can be sanded several times, if the need be.
- The top layer is finished with environment-friendly lacquers or oils that do not contain solvents or formaldehyde, and do not give off any hazardous gases.

ESTA SPORT

For Top Layers of Sports Floor we offer 3 strip Oak, Ash, Beech, Merbau and Maple in thickness 3.5 or 6 mm for Long Life products. Any of the presented species can be offered stained. Please note that there is a possibility of making 9 strip flooring on plywood core.

- The sports floor supplied by Esta Parket to Sport Events like Olympic Games in London 2012 has demonstrated a great performance.

Esta Parket uses sports lacquers from top manufacturers whose products are certified with EN-14904 athletic floor performance standard.

KLUMPP
COATINGS

Dance and Sports Floor solutions available upon request

CLIMATE

To minimize the expansion or contraction of your floor, the building should be well ventilated and relative humidity level maintained between 40%–60% at all times, before You bring parquet to the sight. Before the floor installation, painting, plastering and cement work must be completely dry. Parquet boards must be left in the room unpacked to acclimatize at a temperature between 14°C–23°C for a period of at least 48 hours at a relative humidity level between 40%–60%.

PARQUET BOARDS AND HEATED FLOORS

Floors with underfloor heating are more and more popular.

For heated floors we recommend to use ESTA PARKET 14 mm thick either laid as a floating floor, or glued down to the subfloor.

Glued down floors distribute the heat more uniformly. The heating system should be adjusted so that the parquet temperature never exceeds +27°C.

The maximum variation in temperature should not be more than +5°C within 24 hours.

Selection of Natural Oak

Wood is a natural living material with colour and structure pattern variation. Following design grading are selected at the factory.

1 Strip Oak Ranch Matt Lac.

1 Strip Oak Elite Dark Matt Lac.

Selection of Natural Ash

Ash is optimal alternative to oak floors, with identical wood hardness. Naturally Ash is almost knot free. Higher selections of Ash are very bright and naturally light color. More rustic selections show high contrast in colours from creamy white to pale tan with the heartwood being light to chocolate brown.

Technomar & Adrem Ltd is committed to conserving the environment and it contributes to sustainable development by responsible and transparent decisions on sourcing of material and the disposal of waste.

Our objective is to live in harmony with nature – now and in the future.

Environmental Policy

This is a sphere of the utmost importance for the company. Our goal is to develop products environmentally friendly and the company is constantly working on it, strictly following the international and national regulations.

The glue, lacquer and oil, we use in the production, are harmless for the environment and health.

We are committed to the sustainability of exotic wood species. By using the latest advancements in wood staining technology on renewable tree species we are able to offer floors in different shades resembling many of the rare exotic wood species. This way we contribute to the preservation of rainforests.

We use our raw materials sparingly, almost without any waste, the off cuts are used for packaging and heating of our factories and offices, thus the minimum expenditures for energy consumption are achieved.

External audits and reviews of our environmental management systems are carried out on a regular basis.
